PROJECTS

Customer Service Management using Pega

April 2024

Pega's Customer Service Management (CSM) automates workflows, unifies customer interactions, and offers personalized support. It predicts customer needs, ensures consistent service through knowledge management, and uses advanced analytics to enhance performance, driving continuous improvement and customer satisfaction across touch points.

Flight Reservation System

June 2024

Developed a robust Java-based application for booking, managing, and canceling flight reservations, with search functionality, real-time seat availability, and an admin panel. Ensured secure data handling and a seamless user experience through optimized backend processing.

Social Media App (Instagram Clone)

February 2023

Developed a social media app with user profiles, photo/video sharing, likes, comments, and real-time updates. Designed an intuitive UI/UX in Figma for a seamless, engaging user experience and smooth navigation.
